

YP Curriculum
Find Your Family

Print out the following pages. Determine the exact amount of kids in the room and make some “families” smaller so that the game turns out even. For example, there are five members in each family, Mom, Dad, Brother, Sister, Baby. If you have 27 kids in the room, and you need them in groups of four-five, you would play the game with six families (enough for thirty players), but take away three babies to make 27.
